Thema	Sensitivity of Tropical Cyclones to Cloud Microphysics
Erstgutachter	Prof. Dr. Ina Tegen, Leibniz-Institut für Troposphärenforschung (TROPOS) Permoserstraße 15, 04318 Leipzig.
betreuender Wissenschaftler:	Dr. Fabian Senf, TROPOS Tel: 0341-2717-7170 eMail: senf@tropos.de
Zweitgutachter	Prof. Dr. Johannes Quaas, Institut für Meteorologie, Universität Leipzig, Stephanstr. 3
Kurzbeschreibung	 <p>Tropical cyclones potentially intensity in future as the climate warms, however, significant uncertainties remain. In the proposed work, the development of tropical cyclones is investigated using convection-permitting simulations with the ICON model combined together with satellite observations. The choice of the cloud microphysics scheme plays an important role for the simulation of tropical cyclones because it controls the phase partitioning within the cloud bands and thus the pathways for precipitation formation. Some indications exist that more sophisticated cloud microphysical descriptions can also lead to better topical cyclone forecasts.</p>
